## C) Copyright 1988 INDUG. All Righta Reserved

No part of this puthichtion may be reprobuced, In ony form, without the urikeen cansant of

 achfort Praducts, al Church Fast, Hendon, Londom, mua 40p.

Writeing FORMAT and running INDUG is now taking up more and more of my time, so from the iat September I intend to give up my consultancy work and devote all my efforts to making things even bigger and better. In the meantime I must admit to being overloaded uith work. Correspondence in particular demand so much time that I an now running about two months baninq. I must give priority to letters from overseas members as they can't use the HOTLINE service.
In future $I$ can't promise to anawor dil letters from UK member: with personal reply but to make up for this I offar two concesstons. First the HELP pace ulil be expanded over the next few months to answer more of your questions through FORMAT. sacondly I'm dropping the charge coz the HoTLINE so all UK members can get instant answers to their problems.
Another change starting trom next month will be the 'Bargain Corner". We will now print mall adverts \{up to, 30 worde\} FREE of charge, provided that it in from a private person inar a bisiness! and the cotal savereised price does not exceed there's no excuse now not to send in that small advert.

Calling all Computer Clubs. I am planning a quazterly listing of computer clubs. If you run, or balong to, a computer club then drop me a line, Give me the name of the club, its meating place, when $1 t$ meet范 and the mama and aderasi of contact (with telephone nimber if possiblel. It would also be interesting to know what your membership is and details of club activities. The fisst list will be printed as soon as I have enough details to make a decent list.

MGT are now settled fnto their new Swnaea premisea and enjoying the luxury of the extra space. Thelr new telephone number is 0792-791100.

Last, but by no means least, we have a regular new column starting thid month. Callad "HACK ZONE" its writtan by Hugh NeLenaghan and will concentrate on games conversion and hacking. I'm Bure it will soon become a firm favourite with readers.
See you next month.
Bob Branchley, Editar.
P.B. Sorry I missed the $2 x$ Microfaix, I fell for one of those 24 hour bugs and couldn't get to London. I will try to make up for lost time at the rext show (September I think).

## NEC PRINTPRR WARNING

NEC(UK)Ltd have idsuse a warning about supplies of theiz 22200 dot matrix printer. It appearis some printers have bean imported Into the UK through the "back door' so to speak.

These printers there produced for the dmerican market so to make them work ovor here someone has modified them finternally. This, of courge, is not to the liking of NEC snd they point out that the printera are not coverad by their normal warcanty or repair sexvice.

Printers fron this suspact bstch have warranty cards that have the address NEC Information Systems Inc of Boxborough, USA. In some cases printers have had their serial numbers removed. If in doubt contact NEC on 01-882-6894.

## PRINTRR PRICE RISE

Japanesg printer manufacturasi are planning what may be jargo incresses in the price of thelr printers. The European Comsission imposed a 33 levy on imported printerg to counter what is seen as 'dumping' on the EEC market.

Epson is the first company to announce an increase, effective from June 13 th. They ace less affected by the levy than some companias as a large quantity of their printern are produoad in printer, the printer, the Lxa00, goes up

## SIRCLAIR GOES STATESIDE

Uncle Clive launched his 298 lap-top into the American market this month. At COMDEX, the big US computor shaw, Sinclairis latest baby was weil recelvad, could thla be the start of his big come-back in the US? He hope \#o.

## NEW STAR PRINTER

Star Micronics have Launched their latest Multifont LC24-10 24-pin dot matric printer. Priced at E379 it has eigit fonts built in, with the option of others bolng added uning plug in cerde. The tert can be aiterad to give shadow, outinne or both, character per second in draft mode or 55 cpi in Letter Quality mode.

## 3X-GUARANTERD

Geff Bobker (zx-Guaranteod) has announced his move Into DISCiple / PLUS D \#oftwaref Long famous for hia utility programe (and his warning - don't ring whan STAR TREK is on) Geff now plans to produce disc verions of most of his programs.

Dear Editor,
Having raad your editorial in the Apris Pormat I got cross about wht you say on spactrun wordprocessors. What do you mean that when you underline a word you do not get right justification line? Rava you trised Tasword 37 As for using a Why not buy Tas-Sperith the BSC, surely you must have bought it. Why not buy TAS-SPELI Erom Tasman? It has got a 70,000 wort dectonary
Tasword 3 . program but I axpact that the Tasword 3 program will work in a siallar way in formatting the output if not being better altogether: In shart there is not a ching you can do with the BBC that you can not do with the Spectran and possibly at a lower price. Anyway keep up the good

Yours Sincerely, Enrico Tedeschi.
OK, froe fhe cop, Tosmord 9 is not yez avatiante for tho OISCIPLE. TAS-SPELL IA only availadie on the +3 and it $18 \pi^{\prime} \mathrm{E}$ very goad aven then. Wext. try the test $I$ gave, $I$ only know af on Spactrun vordprocesgof that will cose elote 50 doing it and thats The lasf Word. And thanks for the final coment. Ed.
Daaz Pditor,
I would like to tall you about my latest buy which was advertimed in FORMAT. It in the DISCLPLE OISC MANAGER. This has turned out to be one of the mast preful items of poftuare I have. No more cataloguing all my diges just to find one program. Load in the Manager and, after a fast search, I can load my program direct. The dise naming facility included is great. No nesd to individually label each disc. Just number each one and the Manager inde the disc number and name.
Initially, i had one or two probleme With the software and trote to Dave hood of Better Bytes outlining what was wrong. The tape which was sent to me would not load on my 42 and, aEter many attempts to get it Fumning, I gave up and sent it back. No letter was forthcoring, instead Dave telephoned mee at home and explained that he had recorded another verifion of the program with two different tape decks and, if that didn't work, he would put tha program onto dise for me. He called back next ovening to check that it had argived and to soe if I wan etill heving problems. He talkad me through the initial loading and running of the Disc Managerl There can't be many moftware houses as cansciantious as this one! Dave ven called me back later to gee how I was getting on and was genuinely interested in my comments about the programs. I have never had guch good service from a business ad $z$ had from Better Bytos and would gladly recommend both the software and the ouner to everyone.
Incidentally, the problem on loading han tince been traced to the grotty tape dack on the +2 .

Youra Sincerely, Ralph Kelly.
Letter官 printied may sometimes be edited for length or clarity.

TROJAN CADMASTER LIGHT-PEN AND GRAPIIICS SOFTWARE REVIEWED
By: JORIN WASE.
This gadget, first introduced in 1986 , is a device which draws diractly on your TV/monitor screen. Yes, truly; you gelect the appropriate colous, width and type of line merely by pointing the pen at the menu; then press the mpace bar, move the 11 ght pen and there you arey in ine.

But I'm going too fast. The rrojan light pen fefther as a Troyan, or badged) now sells to all sorts of computer ownera Spectrums, Amstrads, PC compatibles.... He were not sure how it agreed with our DISCiPLE / PLUS D unite, howaver, wo we 've checked on them. Mere's the reguiti of our teptis.

The light pen comes in meveral varsiont for 48 K , Epactrum and Spectrum 128; for Spectrum+2. I had the 48 A and 22 versions. The package comes as amart, colour-coded plastic box which neatiy holds the cassette, light pen and instruction booklet and stangui penguin paper-back. The instructions for cassetta loading are clear: no krouble, excopt that the +2 software has obviously been upgraded *you no longer need to tell it to ruh. Up cones

Apparontly it all works because the software enables it to "lock on" to the monitor screen scan, so it knows just where it' z writing to, or reading from, Cunning stulf, (Well, I think that right. Tom Jones of Trojan explained it to me when $I$ phoned him. The firm seems very friendly, its eervice is good, and they offer a helpline phone number to uaera in troublel. So What options can it "lock on" to? There are, for egtart, jeven line types, varying from thin to thick, with kwo guille (x-direction 1 inea thleker than $y$ ), a dotted 11 ne and a brush effect " a broad swathe of dots. Select "draw" and point the ilght pen at the screan. Then press the space bar. A large,

White curgor appote. Move the 21 ght pen wlowly and etosdily across the screen - the cursor follows, and a line of the appropriate thicicness is left behind. Pressing E at any time erases the last ifne drawn, so it's best to draw short sections at a time, raising and lowering the space bar between each line and the noxt. Paper sllows you to "invert" part of your mabterpioce, ink geta you back to drawing again. Lots of option are available. tine joins two eursorim and you can do bandints boxel, fay, triangles and circles in whole range of Fizes and pan types. You can copy parta of your ereation to anothar part of the screen, fill bits with a specified colour (within the Spectrum's Iimitations) add text or make a window which can then be used For erasing a spacified area. There ia an option to print copieg and the fecility to gave or load screens.
As whole, the package worked pratty well. My son much enjoyed witing his name (see screen dump). Wy wife likes the idea and will test it on her Spectrum in school with hes class. It's great tun toy - with limitations. The accur゙变cy of lines, particularly a one pixel line is not particułarly good, so you're not going to get the same results you would with a graphica package = this is for the quiek, bold effect. I tried holding a ruler to the screan, but this if difficult becauge you nesd a third hand to prosas the space bar, blthough it did keep the ilne from wobbling so much when I got someone elat to hold the bar down.

The software works well, and is easily converted to various devices. I tested it with the Disciple, with and without the oifelple version of the atandard kampiton mouse interface attached, with the pLUS $D$, with and without the mouse interface. The autorun option on the microdrive and opus both nead a file cslled runs on the bisciple / PLuS D you noed a file called AUTOLOAD. In this case, put a newly formatted disc in drive 1 , and do MERGE mm. When You have read in the first file from the tape (calied CADMASTER2), stop the tape. List the program and modify line 8000 , changing 11 תe 8000 to AUTOLOAD if you want it to mutoload. It you don t, then change it to CADMASTER but not to CADMASTER2 - it will overwrite the code file when it saves. Finally, do CLEAR 39000: LOAD "MCODE: GO TO 8000, restazt the tape and it will gave it all to disc.

The disc now loads the software beautifully. And whatever the dise unit, if you select the mierodrive save option, it will now gave your plcture to disc. Greatll The three versions are all different. If you have spaetrum with an ear socket on the back the $4 B k$, the spectrum or the sinclasm $128 \%$ - then you noed the version which has to have a PP3 battery in the clip at the and of the table, so if you're atking for this as a gist, or for that mattez giving it, do include the battery = it's not in the Trojan pack. And $f$ found that this version needed the television curned up much higher than the t2 version. Incidentally, it' not in the inatruction book, but if the draw forean flashes alternately black and witit and the Spectrum baeps in time, it mana tha signal koo low ond the pon can't "ock on's just tuEn up the telly.

In short, this pen will never wake you a graphie genius, but
it's great fun, it all works, and at oither E19.95 on 1 te own, (all verslons) or bundled with "The Last Word" as a package called "Graphprobe" at E29.95 and it's excellent value. TROJAN PRODUCTS, 166, Derlwyn, Dunvant, SA2 7 PF .

In last monthe FORMAT we promised PLUS D owner需 a pos upgrade to alatch the one we did for DESCiPLE users. Well hare it Ia, version "A but before we go too fier lete explain the differences between the durrent $G+D O S 1$ and $G+00 S$ 2. These 1 an ${ }^{4}$, any... the difference is in the ROM. When you "boot" your system there a britet flash of a message giving tha rom version number, RoM 1 , the first obviousiy, and ROM 1A, which was introduced early this year to counter problems with some dise drives. Two changes where made, one to the formatting routine and one to the sactor resd routine. To allow the PLUS D to work wherd dsc drive that do not have proper back-都op', in othar word driver ther the has could ind itself on track -1 . There called in ROM called in ROM.

OK, now to the real buafness of the day. All of the comments in last months GDOS update relating to opENTYPE file handing apply to $6+D 0 s$ to to save space $z$ wont bother to repeat tham here, However when snvastigating the PLUS $D$ fysem anothar probem was rounde res in the Move command, then moze that one file had MOVEd ta an OPENed dise channel the resulting output fle had a zero length.

G+DOS is remarkably bug-free for such a complex jystem but aa Walter keliy was good enough to point out in issue ofit did meed a fix to work the 'Fuli Screen Editor' in $128 \%$ mode on the +2 , Don't blame grtee Gordon Gor that one, blamo Nistkab for mucking up the $120^{\prime} \mathrm{s}$ ROM. Walter's fix is included in this months upyrade.

Next some improvements to the file copy rootine. When you copy
 you are told to chenge disc and press mace. Fine if you are cransforifng ont or two Eiles but, if you are copying lotin, itg dil to ealay to get the two diacs mixed up which could cause a dissater if your original disc isn't "Write Protacted". The new routine gets round this by prompting you to Inتert source disc - Press SPACE' and 'Insert TARGET disc - Pregs SPACE' so there's less chance of confusion. Walter Kelly has also provided a solution to another problem for l26k uner. When the SAVE,.TO.. command is finished it does a systum NEW, a the $4 B K$ ROM is paged in this leavan iz\&k usere in fig mode with the annoying job of pressing the resat button betore they can aelect 128 k mode from the front menu. Walteri folution ia to test for the RON that cailed the DOS routine and, if it was the $128 k$ ROM, to do a 128k reset to put you etraight beck to the menu.

[^1]1int 399．People with KOM iA ean forget 1ines 400－490．Most barA statement：liatings seem to give problems to some people so this month we make life VErY easy for you．Each DATA inne ends in a negative number，this is the sum of the data iteag fwith so counting as 256 co avoid issing zezas）subthen the check－sum in then test for sero．If you get an error look for the DASA line starting with the addresB givan．

## BETA BASIC SPLICERS

In the resent raview of the excellent BETA BASIC，John Wase tated fas does ite authos Dr Vrights that you can＇t save ＇SPLICERS＇（partE of prograns or veriables oniy）to dife on the DISCiPLE／PLUS D．In fact 128 k users can get around this in the following way．
Firgt use the sAvE1 command to copy the section you want to RAM DISC．However，you munt rame the file an a string array 1．e． the last charactor mwst be＇s＇iggn．After that tranefer the file to disc using the orenf a çosef commands to creata an OPENTYPE File．To reload the Eile INPUTI to place ft back into RAM DISC then MERGE！to insert into your program．

The following Inge⿱⿱亠䒑日心十 from my own database progran thow you how eagy it is：－

1000 SAVEA DATA＂MAGVARS＂
1010 OPEN＂8；d1＂MAGVAR\＄＂OUT
1020 LIST＂E；1＂MAGVARS＂
1030 CLOSE \＃＊
2000 OPEN 7；dI＂MAGVARs＂IN
2010 INPUTH7：1＂MAGVARS＂
2020 CLOSE ${ }^{2} 7$
2030 MERGE！＂MAGVAR\＄＂
gave varidables to RAM DISC ：tranafor previoubly saveld vaxiablea to aisc．
open input file
copy file to RAM DISC
copy ske
iand morgo into program

The same methord can be used for progran routines etc
Lou Oliver．Perth．

## TASHORD 2 El（c）

This ifttle machine code coutine phtches Tavword 2 wo that the pound，hash and copyright aigns are primted out in high－res mode tjust like the DOS does when you LPRINT or LifiSTl．First load Tasword in the normal way and axit to Basic fopkion B from menu then type in the following tempory lines：－

9000 FOKE 60823，205：POKB 60624，40：POKE 60825，20．
9005 LET Ca0
9010 FOR I＝58152 TO 5月229：READ H：POKE I，N：LET C＝C＋N：NEXT I
9015 IF C $\because 3557$ THEN PRINT＂ERROR IN DATA＂：STOP
9020 DATA $229,197,254,35,32,5,33,62,209,24$
9025 OATA $21,254,96,32,5,33,94,209,24,12$
9030 DATA $254,127,32,5,33,106,209,24,3,215$
9035 DATh $24,7,5,12,126,35,215,16,257,193$
9040 DAPA $225,201,27,75,8,0,0,36,126,36$
9045 DATA $36,126,36,0,27,75,8,0,0,1$ 日
9050 DATA $126,146,146,2,0,0,27,75,6,0$
9055 DATA $126,129,189,165,165,165,129,126$
Now RUN 9000 then，if thore $i s$ no error in the data，type RUN to enter Tasword．Salect option＇s＂from tho menu to eave the progran to a fresh dinc．

Once tested you can alwayn relond and delete the extra lines of Basic（the routine ds now part of the coDe file）then ave your new working copy of Tasword．

Dave Marriott：IMondon．

## INTO SNAP

Here＇a Ifttla one for PLUS D owners which someone will find a use for I＇m sure．Enter RAMDOMIZE USR 102 and its just as if you pressed the Snapshot bulton．

D．Talbot．Oldham

By：Bob Brenchley．
In last monthe FORMAT we did an upgrade ot gDOS to version 3c． Well first I must eat humble ple，in transcrlbing my work copy of the amendmentes to the manter copy I lose an initruction．If In Banic you try to OPEN a tile that alresdy existis the aystom will crash：fy Eault entiraly and I plead temporary insandty for is it permanent？I sonetimes wonder）．Still i needed to $\$ 1 \times$ it． but in the meantime I discovered few other things fpartly due to the pLus D spdate，see this issue）that needed altering．

The wOVE command now worke as it should（dee PLUS D articke） and there＇s couple more modificetions to the Command Codes whleh 1 will explain in a later article．

Type in the listing and hey－presto version 3d．Pleasa read the notes in the PLUS D UPOATB article about the new DATA check－gum

The only reperted bug so far that $I$ can＇t $E\{x$ as part of this upgrade（its in the ROM）comeB when you gat tho error Not enough SPACE on disc＇when saving a file．Once this messaga has been printed it will keep coming up，even if you change to a blank disc，until you switch off and start again．Reloading the syster file has no effect as the ROM routine that causes the trouble is testing location 7455 （1DiF hex）which is not overwitten when you raload the system file．

You will be pleased to hesz，there is sif answor though POKE 96791， 0 will clear the flag that causes the probiem．Now you can insert dessc with Eree space and gaye your fike．

I hope the new bos will now perform well for you，if there are any nora bugis you know of then drop me a line giving detaide．

By：Hugh 3．Mclenaghan．
To start off this month I have a conversion of Tai－Pan．This game is protected in a clever way，hin its a 128 k progran，it uade the AY－3－8910 sound chip．ha soon as the game has loadea， ft sends out the value of 229 to channel 15 on the sound ehap， which is unused and therefore will be unaffected by any output of sound．The progran usas interrupt mode 2 which ealla a routine 50 times a aecond，during the call the routine chacks the contente of channel is and if it is not 229 then it doen a syster reset．

The Snapshot routines on the DISCiPLE／PLUS D do not eave the contents of the eound registers，Bo when you load the game channel 151 set at 0 and thezofore the program roant

Hera dia the chack routine：－

> LD A, 15
> LD BC, 65533
> OUT $(C), A$
> IN A, $(\mathrm{C})$
> CP 229
> $\operatorname{RET} Z$
> JP 0

The lagt command does the dygtem reset，but the command before is the one which ve are Interested in．By changing this to a ＂RET＂instruction the game should
run aa normal．To convart Taf－Pan what you do in ko load the game from tape，Snapshot it to disc as usual，then type in and run the following prograta－

Well thats it, five parts all dona. I hope that the comments and explanation Yili enable you to convert GENS 3.2M to disc usagg. I can't say for certaln if the code will work on later usage, i can t Gay ror certaln if the oode will work on later varaion of GEWs but thing cant be that difzerent so a littla right dizection.

If any of you have made enhancements of your own why not drop me a line, c/o FORMAT, as I would be only to pleased to hear from you.

## BACK ISSUES

For momber who have missed past isatues of FORMAT (or perhape worn thelra out througls constant use) we run a back=1ssuo gervice.

The cost is 65p per copy (85p overseas) which includas postage. Your copies will be sent out as soon as possible but postage, Your copies will be sent out as soon as possible but, in order to keap printing conts down, it may take up to 28 days turo-Choquath) payable to INDUG.

## A MONTHLY FEATURE

By: Patrick McMahon.

## TASWORD 128

Keving bought a Dlaciple dise interface, I find that $I$ cannot get Tasword 128 to work with it. I have contacten Tasman Soltware regarding the above problam and find that they cannot directly helo. I was directed, however, by them to dontact the Micro Shop in Glasgow who will on recelpt of the program on tape, and a fee of \& odd, send a curtomised dopy back to you on alsc.

So far I have not availed myself of this pption, preferring to Find the anformation myself or seek advice from someone like yoursalvam, hopefully costing somewhat less. I look forward to hemring from you soon.
M. A.HIndle. Norwich.

Tasword 128 is not compatibla with disc because it makes illegal calls to the Interface 1 ROM when you atterpt to usp the microdrive commands.

Howaygr, I would not recommand the converbion you whara told about. It 1 not not amplete conversion, you lose eeveral features, and it does have some wajor bugs, n new converason is being worked on and thin should be available through INDUG very soon so keep watching these pages.

I'm trying to convert a program fron microdrive to DISCIPLE and have come up againat the following lineef

It doesn't work, the computer resets thats all. Any idea why?
Paul Ork. Sweden.
Yet Paud, the correct motax $\mathbf{\text { for the DISCIPLE or PLUS } 0 \text { is: }}$

Note the "*" in the close, this is to force a syntax faller in the Spectrums ROM so the bos can process the command. The 'IN' the Spectrums ROM so the Dos can process the command. The iN off, the $\$ 110$ will be opened to READ, if it exista on the diac, or flso at WRITE \&ile.

Whis month I am looking at the message services avatiable on restel and sicronet. Prestel has a number of different types of message services which includer- Mallboxes and Talexal

Mallboxas have bean around for quite sond time, almogt Eince Proatel's birth. All maliboxas aro handled by PANDORA, a sreatel computer, which recenves the mallbox mestages and holds them until usar wants to read, erase or store them. There are about half million mailbox mespages gent overy month by anyone who wants to comsunicate with other Netters. With all this it is surprising that PANDORA has to bo cloged for hale an hous nimht, usually at about two in the mornimg.

## P1g 1

Pig 2

The system is soon to le improvad with such thinga as reply option forward option, alstribution liets tummary 1izts of new and stored mossagos and acknowledgement of receipt. Theme additions hould ake what few dere than adequate service even better.

Fig. 1

## E19. 2

Sonding a matibax \& vary easy, koying "7 vill gat you to tho mailbox page where you can select a varlety of different typen of mailbox frames. These range fros "Thank-you" frame to one
that says "Drop Dead", all rather crudely drawn using the limited graphice available on Prestel. Once you have chosen yous message frame, which can be just a text only one, all you have to do is to key in the railbox number of the person you want to send it to, write your message and then send it. The persan will receive the mallbox the noxt time he logs onto Prewtol.
Inesdentally, the Maijbox frames, and all other framen on Micronet for that matter, ara going to cost ip sime per minute to access from $15 t$ July. This is proving very unpopular with almost all Micronetters and, it is hoped, protest will Iorce ehange of Micronets mind.

A telex Eervice is also available on Hicronat, uifnc Hicronet at the telex base and distributing the telaxte by moans of its mailbox gystem. Sending the telex in very gimilar to fending a mallbox although, of course, the telex can be transmitted anywhere in the world (providing that the parson you are sending to has telex facilities). To receive a telex just give the render the wieronat talex number and your mallbox number and of they go. Incoming teloxes vill appear in your mallbox just like other messages.

Fig 3

## Fig 4

This 1s extremely good value comparing the price of a talex machin (El000 + in most cases) againet that of choap computer, modem and a mubscription zo Micronet. Sending a taiex anywhere in the UK will only eost 50p but overseas talexea wil cost El or more depending on that country's communications and the distance. Rowever, Hicronet boast that a telex can reach its destination $\mathrm{in}^{3}$ minutea or less.

The only drawbick of this service in the problem that arises 12 the telex amehina mpposed to be gociviving the tolux in busy; the Micronet telex sender only trien three times before giving up. Thi if the only fault ot a service which in my opinion is worth the Nicronet subscription on $1 t 8$ own. Remember chat talex users are much more common overseas than they are in the UK. At last, through Micronet and Prestel we may be aatching up.

By the way, if any of you have sny commenta, problems or otherwite do not hesitate to contmct me on Hicronet, my mallbox rumber is 7027 12746.

Next month'g article will be on the weather and news coverage on Micronet.

FORMATS Softward Service provides DISCipLE and PLUS D owners With a growing range of moftware spacially dosignod for thois syatems.
